PROLOGUE

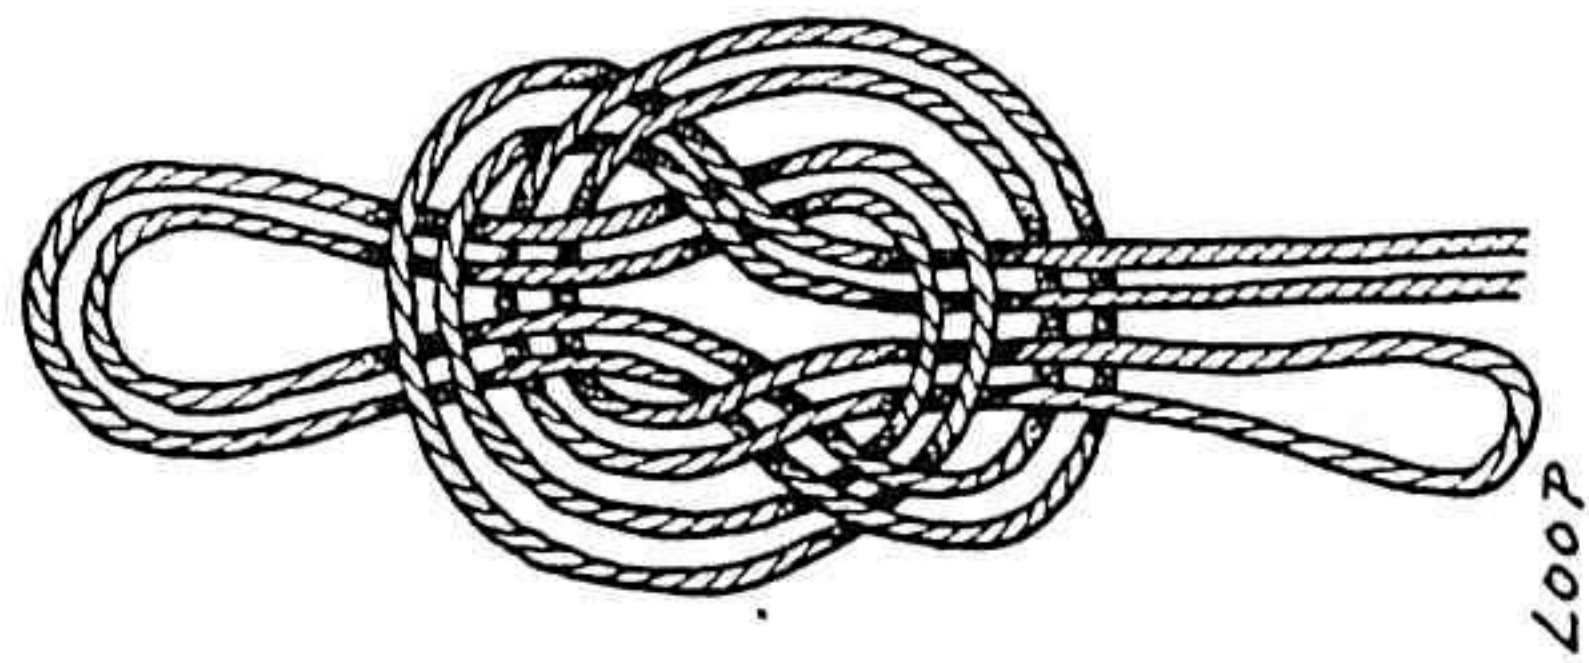

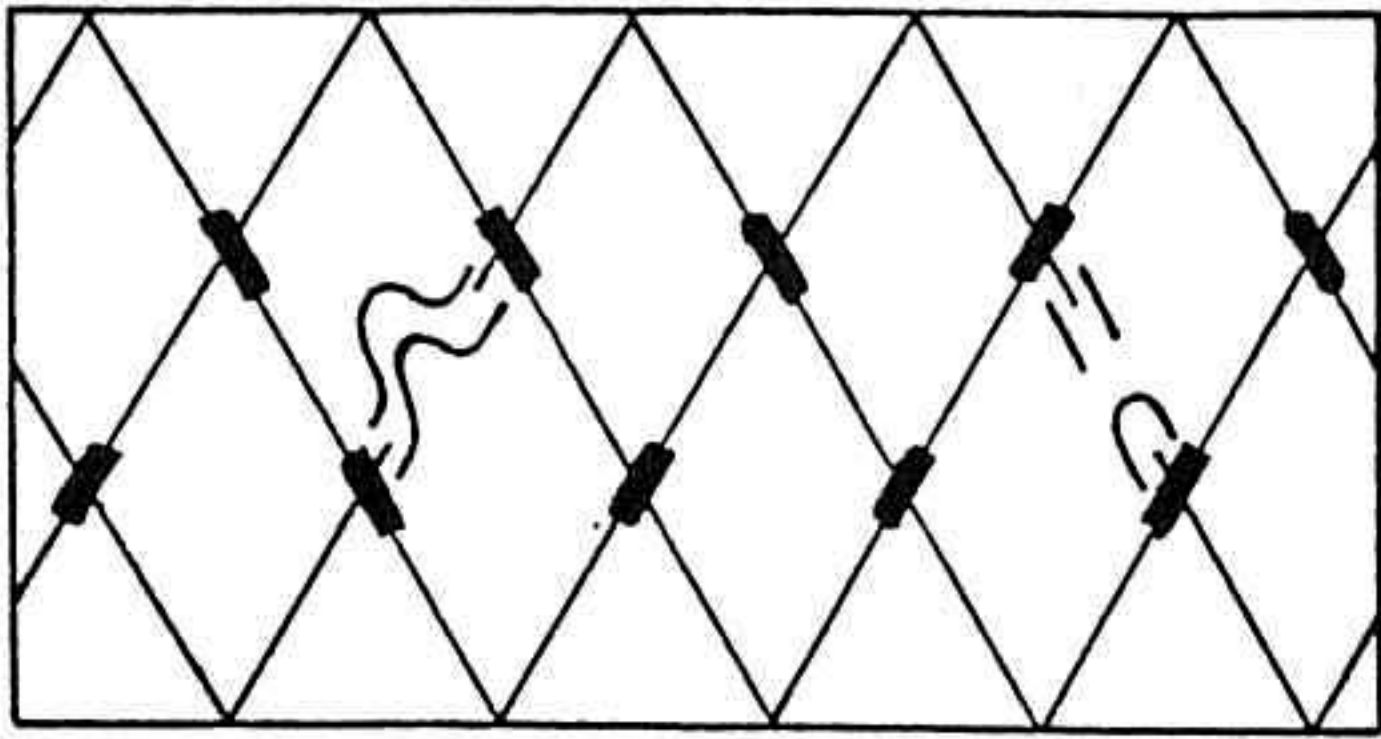

In this book we have introduced the braider to our grid-diagram and calculation methods for designing and constructing the more elementary types of fiador knot.

There are many advanced types, of great beauty, which we shall treat in a later book. In order to construct the advanced types, it is necessary for the braider to have fully mastered the methods described in this volume.

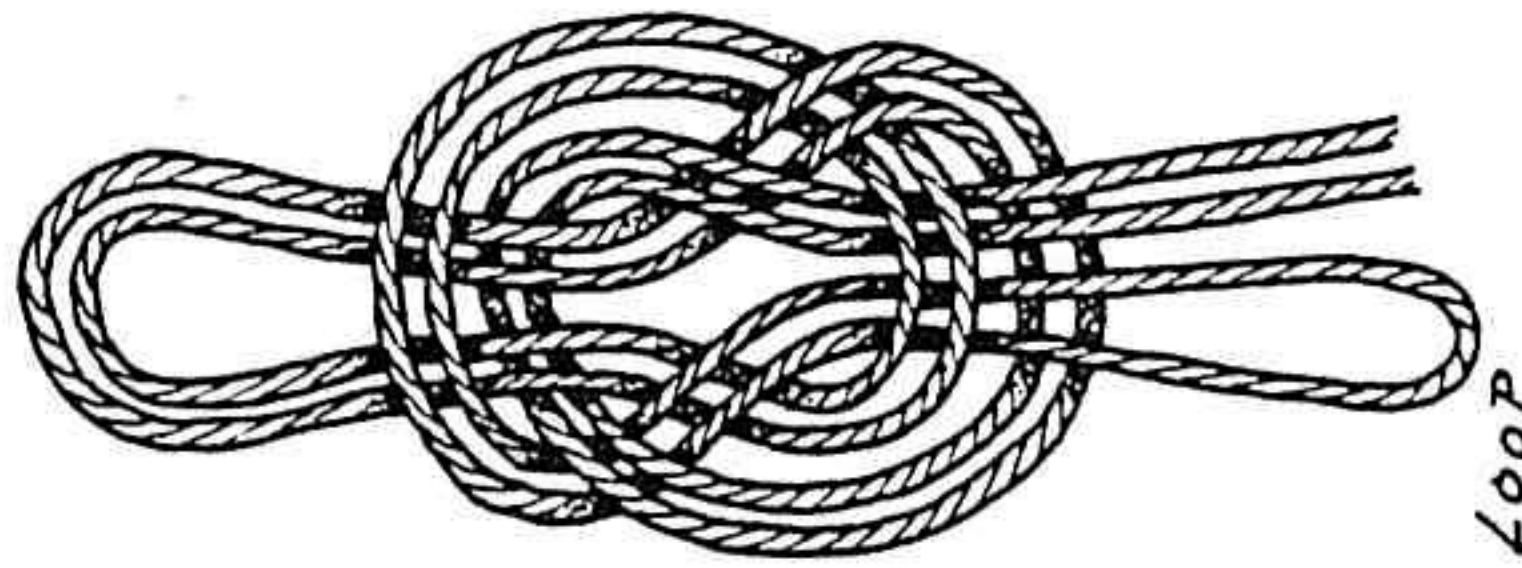

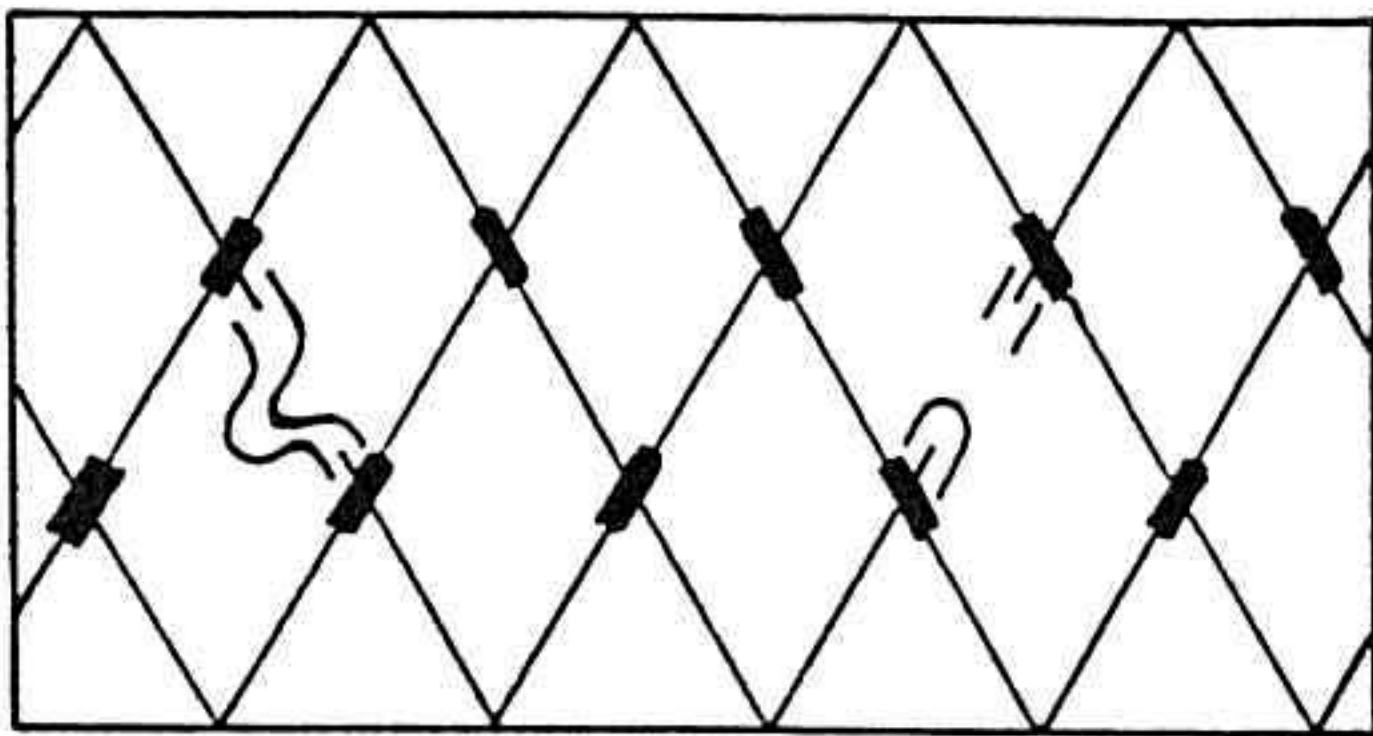

The following photographs show two examples of the more complex forms of fiador knot that can be braided.
