## LOADING A PROGRAM IN EMU48

IFF you have trouble running the EMU48 downloaded from my site you have to install your own EMU48 from scratch so just go

http://www.hpcalc.org/search.php?query=EMU48

## there **download** both

\*\*\* EMU48 1.47 <u>http://www.hpcalc.org/details.php?id=3644</u>
 \*\*\* CASEY's HP48 Graphics <u>http://www.hpcalc.org/details.php?id=3635</u>

Create a folder, say EMU48TEMP Unzip EMU 1.47 Run the install of EMU48 DON'T FORGET TO ADD THE ROM.48G file in the folder where Emu.EXE is ( this file is in the download but not in the install ! )

In the folder of your newly installed EMU48 unzip CASEY's graphics : this will give you several rendering of an HP48

The best IMO is UPLIFTER'S GX by MARK CUBBEDGE based on a photo of a real HP48 (JEMAC'S)

It only remains to install my programs.

Juts **download them** from my site and put them as I did in a folder : MyPrograms that you will create in EMU48

**RUN** your **EMU48** (read other files such as EMU48 STARTER INSTALLING YOUR EMU48..... (remember in the download zone of EMU 48 on my site are a number of PDF that give you user's tips )

FRATE HORE CLEAR	Image: State of the state

The Goddess is a bit naked !

We will have to dressed her a bit. ( here it is mine so it is already decently attired )

There we SELECT the .HP FILE that interest us, say BALG.HP. Double click on it to **save it inside the HP48 emulator**.

The whole file, in this case a DIRECTORY has been put on THE STACK

It remains to STOre it.

For that we need to NAME IT.

SO first use the first key of the third row (from top ) to put [ ' ' ] at the bottom of the stack as in

ILXAMPP\xampp\htdocs\MON SITE\TEST-DU-SITE\MODELE-8\Emu48\MyEMUsite.E48 File Edit View Tools Help

Now we have to write the NAME.

Press twice the ALPHA key (just above the Violet Left Arrow and under the marge ENTER key. This will put an ALPHA reminder in the uppermost part of the screen. Now the keys are "loaded ands locked" to gibe 'letters'.

## Now **TYPE THE NAME** :

**NAME HAVING BEEN ENTERED** you still have to **UNLOCK the ALPHA** by pressing once on the ALPHA key.

128K RAM
