# PINEAPPLE KNOTS NESTED BIGHT KNOTS ALGORITHM MADE EASIER 

( once again inspiration is coming from THE BRAIDER - so using the mandrel frame of reference)
This is intended as a crutch for people who, for whatever reason, cannot grasp (or have no interest in) the EMU48 / HPG48Gx programs : PINEAPL and PINEAPL2.

You will make it easier for you by reading the user's tips for the afore said programs as we will be working with the same example:
2 SET (5L 4B and 7L 4B ) of THK COMPONENT forming a PAK 31 LEAD (5 PASS * 4B*) BIGHT .
The documents are :
*** ST_HERRING_PINEAPPLE.pdf
*** HPK-math.pdf (see page
PUBLICATIONS_3)
Fig 1 (just above)
A serious study of the Bight Sequence (Complementary and Cyclic and Bight Algorithm for knots made on a THK cordage route (shadow) in pages Turk's head_12 is more than counselled too.

I should insist that you study the PINEAPPLE in pages Turk's head_14; Turk's head_15; Turk's head_16 or that you read two or three dozen dozens pages of SCHAAKE work!

In here you will not even be required to engage brain gears beyond blindly following the « Schaake's recipe » without unduly worrying brain circuitry about the ' why of the how '.

Considering the experience born from the knot tyer circle endemic habit of using (it is, regrettably IMO, the quasi exclusive way ) handed down recipes I feel reasonably certain that this should not constitute an Herculean task for any, and anyway I don't force anyone! ;-)

You will recall that index-numbers are calculated for each half-period (HP) using 2 formulas $\mathrm{i}=($ HPeven -2$) / 2$ and $\mathrm{i}=(\mathrm{HPodd}-3) / 2$ depending of the fact that it is odd or even numbered. odd-numbered HP are ( mandrel frame of reference ) from low-left to up-right. even-numbered HP are from low right to up-left.

As for easily finding the Complementary and Cyclic (periodic for me) Bight Sequences just use Delta $=(-L)$ modulo $B$ as $<$ step »

| L-1 = | A-1 = | A-1 = | A-1 = | R-1 = | TO |

For interlocked (so called inter-braid or interwoven) TRUE THK the generalised form is :
Read Left to Right

The ' $\star$ ' are for the $i$-values of the Bight Sequence of the THK THAT IS BEING PUT IN AT THE MOMENT. The value AbOVE or UNDER $a^{*}$ increases by 1 WHEN THE ASSOCIATED VALUE IN THE BIGHT SEQUENCE IS LESS OR EQUAL TO THE i for the HP concerned $(\mathrm{i}=(\mathrm{HPeven}-2) / 2$ and $\mathrm{i}=(\mathrm{HPodd}-3) /$ ) ADDING ONE IS ONE-TIME ONLY, NEVER TWICE AT THE SAME PLACE.
The last entry (in the direction of reading) for the odd numbered low-left to up-right HP ( Right ${ }_{(i)}-1$ ) stay identical for the whole of them.
Idem for the even numbered low-right up-left HP, the last entry ( $\operatorname{Left}_{(i)}-1$ ) stay the same.
'A' PASS as you will immediately and unfailingly remember imply A! or 'factorial A' DIFFERENT WAYS of making the knot.

Please no silly remark such as I have seen from the keyboard of nevertheless very competent "spiders" about "you HAVE to do it in that order" : this is meaningless and just show abominable ignorance of the reality of those knots.
$5!=5$ * 4 * 3 * 2 * $1=120$
We chose one way so leaving aside the 119 other ways EXACTLY IDENTICAL IN FINISHED PRODUCT.
PASS 1 , PASS 2, PASS 3 will use a SET of THREE THK COMPONENT 7S 4B* ( $S$ is the $L$ or $P$ of the component THK ; you may 'think' 7L 4B but this can lead to ambiguity as L and B should be applied to the final nested bight knot )

PASS 4 , PASS 5 will use a SET of TWO THK COMPONENT 5S 4B* ( $B^{*}==$ the number of BIGHT NEST as you already know from previous attentive reading)

7-7-7-5-5 could have been 7-7-7-5-5 or 5-7-5-7-7 or 7-5-7-5-7 or 5-5-7-7-7
or 5-7-5-7-7 or 5-7-5-7-7 or 7-7-7-5-5 or $\ldots$-.take your pick!
in here LEFT ( $L$ not to be confused with the $L$ of Lead ) and RIGHT refer to the BIGHT BOUNDARIES
PASS 1 S = $7 \quad B^{\star}=4 \quad$ LEFT $=1 \quad$ RIGHT $=1$
PASS $2 \mathrm{~S}=7 \mathrm{~B}^{*}=4$ LEFT $=2$ RIGHT $=1$
PASS $3 \mathrm{~S}=7 \quad \mathrm{~B}^{*}=4 \quad$ LEFT $=3 \quad$ RIGHT $=1$
PASS $4 \quad \mathrm{~S}=5 \quad \mathrm{~B}^{*}=4 \quad$ LEFT $=4 \quad$ RIGHT $=4$
PASS $5 \quad \mathrm{~S}=5 \quad \mathrm{~B}^{*}=4 \quad$ LEFT $=5 \quad$ RIGHT $=4$
REMEMBER that those 'bight boundary' numbers
ARE NOT THOSE IN THE FINISHED KNOT
but those
IN THE PROCESS OF MAKING THE KNOT, IN THE ORDER THEY ARE APPEARING !
so LEFT or RIGHT CANNOT BE SUPERIOR TO ' $A$ '.(remember that when using program or making your own paper \& pencil calculation.)

FINISHED KNOT $12345 \ldots \ldots .$.
PASS 1 | 1.......... 1
PASS 2 | $12 \ldots . . . . . .21$
PASS 3 | $123 \ldots \ldots . . . .31$
PASS 4 | $1234 . . . . . . . .4321$
PASS 5 | $12345 \ldots \ldots . . . .54321$

Example 1: $L=5 \quad B=4 \quad L$
Delta $=(-5) \bmod 4=3$
So
4 B lead to

$0 \quad 3 \quad 6 \quad 9$ which with applying modulo B ( with $B=4$ ) is
$\begin{array}{llll}0 & 3 & 2\end{array}$
this Bight sequence give for 5 L
$\begin{array}{llllllll}0 & 3 & 2 & 1 & 0 & 3 & 2 & 1\end{array}$
to be read LEFT to RIGHT
and the cyclic
. . . . .
$\begin{array}{lllll}0 & 1 & 2 & 3 & 0\end{array}$
to be read to RIGHT is LEFT

Example 2: $\quad \mathrm{L}=7 \quad \mathrm{~B}=4 \mathrm{~L}$
Delta $=(-7) \bmod 4=1$
So

0123 which do not need that modulo 4 ( or modulo B ) be applied.
this Bight sequence give for 5 L
$\begin{array}{llllllll}0 & 1 & 2 & 3 & 0 & 1 & 2 & 3\end{array}$
to be read LEFT to RIGHT
and the cyclic
. . . . .
$\begin{array}{lllll}0 & 3 & 2 & 1 & 0\end{array}$
to be read to RIGHT is LEFT

Suppose that after writing Fig 2 we want to use it with bight algorithm as main tool :
SEE ANNEXE FOR THE 'working' of the tool

## S=7 $B^{*}=4 \quad A=1 \quad \operatorname{Left}(\mathrm{i})=1 \quad \operatorname{Right}(\mathrm{i})=1$

starting point is :
Read Left to Right

| $(4)$ | $(4)$ | $(4)$ | $(4)$ | $(3)$ | read Right to Left |

hence

```
HP 1 U4 - O4 - U4 - O4 - U3
HP 2 (i=0) U3 - O4 - U4 - O5 - U4
HP 3 (i=0 ) U4 - O4 - U4 - O5 - U3
HP 4 (i=1) U3 - O4 - U5 - O5 - U4
HP 5 (i=1) U4 - O4 - U5 - O5 - U3
HP 6 (i = 2) U3 - O5 - U5 - O5 - U4
HP 7 (i = 2) U4 - O5 - U5 - O5 - U3
HP 8 (i=3) U4 - O4-U4 - O4 - U3
```

TRUE, the result is attained....even if somewhat painstakingly.
Instead of working successively fiVE different algorithms a much better and easier way is to use only Two algorithms, one for EACH OF THE TWO SET of THK COMPONENTS BORROWING THE READYMADE by SCHAAKE \& TURNER.
Here they are.
DO NOT OVER TAX YOUR BRAIN ! DO NOT ATTEMPT TO UNDERSTAND : JUST DO THE USUAL KNOT TYER TRICK :
THE ONE WHERE "RECIPE HANDED DOWN ARE SLAVISHLY OBEYED". ;-)
For those wanting to exercise their brain as it should always be exercised in other words to its fullest, then just read 300 or 400 pages of SCHAAKE \& col and do not squander precious time here.

Fig 4

| SET NUMBER | 1 | 2 | 3 | 4 | 5 | $S=5$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TYPE OF CROSSING | UNDER | OVER | UNDER | OVER | UNDER |  |
| Reference for LEFT to RIGHT | L-1 |  |  |  | R-1 |  |
| Reference for RIGHT to LEFT | R-1 |  |  |  | L-1 |  |
| HP-1 LEFT to RIGHT | L-1 | A-1 | A-1 | A-1 | R-1 |  |
| $\underset{\substack{\text { HP-2 RIGHT to } \\ \text { LEFT }}}{ }$ | R-1 | A-1 | A-1 | A | L-1 |  |
| $\left\lvert\, \begin{aligned} & \text { HP.3 LEFT to } \\ & \text { RIGHT } \end{aligned}\right.$ | L-1 | A-1 | A-1 | A | R-1 |  |
| HP4 RIGHT to LEFT | R-1 | A-1 | A | A | L-1 |  |
| $\begin{aligned} & \text { HP-5 LEFT to } \\ & \text { RIGHT } \end{aligned}$ | L-1 | A-1 | A | A | R-1 |  |
|  | R-1 | A | A | A | L-1 |  |
| $\left\lvert\, \begin{aligned} & \mathrm{HP}-7 \text { LEFT to } \\ & \text { RIGHT } \end{aligned}\right.$ | L - 1 | A | A | A | R-1 |  |
| HP 8 RIGHT to <br> LEFT | R | A | A | A | L-1 |  |

First row is for the SET NUMBER: concerned here are not the thk COMPONENT SET but the SET OF CROSSINGS in a standard herringbone pineapple knot. If you have read what I counselled you to read that will be clear for you. If not then I am sorry but I will not lose precious time (mine) repeating what is written elsewhere just for the sake off those having not made their own effort.

## Second row is self-

 explaining
## Third and fourth rows

are giving the "general" algorithm" and will serve as "memory" cells for already laid PASS.

Fifth to last rows (number depending on $B^{*}$ ) are the coding for each half-period (HP) in the COMPONENT studied.

Fig 5
You will note that the rightmost column has cells with a violet background :
there is NEVER ANY MODIFICATION IN THE *FORMULATION" in those cells.
All the other columns for SET of CROSSINGS see some modification at a given point.
Note that once a modification has happened it 'survive' in all the cells that are below in the same column. (background in those cells is in sky blue colour to highlight them to your attention.)

Needless to say that this 'specific repartition' is only for this GIVEN TABULATION.

Now for using it on the same PAK that we used before.

| SET NUMBER |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | 1

Just under is a completed table :

| SET Number | 1 | 2 | 3 | 4 | 5 | 6 | 7 | $S=7$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TYPE OF CROSSING | UNDER | OVER | UNDER | OVER | UNDER | OVER | UNDER | 5 PASS B* $=4$ |
| Reference for LEFT to RIGHT | 0 |  |  |  |  |  | 0 | $A=1$ |
| Reference for RIGHT to LEFT | 0 |  |  |  |  |  | 0 | LEFT boundary = 1 |
| $\begin{aligned} & \text { HP-1 LEFT to } \\ & \text { RIGHT } \end{aligned}$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 | RIGHT boundary $=1$ |
| $\begin{aligned} & \text { HP-2 RIGHT to } \\ & \text { LEFT } \end{aligned}$ | 0 | 0 | 0 | 1 | 0 | 0 | 0 |  |
| $\begin{aligned} & \text { HP-3 LEFT to } \\ & \text { RIGHT } \end{aligned}$ | 0 | 0 | 0 | 1 | 0 | 0 | 0 |  |

| HP-1 LEFT to RIGHT | 3 | 3 | 3 | 3 | 3 | RIGHT boundary $=4$ |
| HP-2 RIGHT to LEFT | 3 | 3 | 3 | 4 | 3 |  |
| HP-3 LEFT to RIGHT RIGHT | 3 | 3 | 3 | 4 | 3 |  |
| HP-4 RIGHT to LEFT | 3 | 3 | 4 | 4 | 3 |  |
| HP-5 LEFT to RIGHT RIGHT | 3 | 3 | 4 | 4 | 3 |  |
| HP-6 RIGHT to <br> LEFT | 3 | 4 | 4 | 4 | 3 |  |
| HP- 7 LEFT to RIGHT | 3 | 4 | 4 | 4 | 3 |  |
| HP- 8 RIGHT to LEFT | 4 | 4 | 4 | 4 | 3 |  |

| SET NUMBER | 1 | 2 | 3 | 4 | 5 | $S=5$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TYPE OF CROSSING | UNDER | OVER | UNDER | OVER | UNDER | 5 PASS B* $=4$ |
| Reference for LEFT to RIGHT | 4 |  |  |  | 3 | $A=5$ |
| Reference for RIGHT to LEFT | 3 |  |  |  | 4 | LEFT boundary = 5 |
| HP-1 LEFT to RIGHT | 4 | 4 | 4 | 4 | 3 | RIGHT boundary $=4$ |
| $\mathrm{HP}-2$ RIGHT to LEFT | 3 | 4 | 4 | 5 | 4 |  |
| $\begin{aligned} & \text { HP-3 LEFT to } \\ & \text { RIGHT } \end{aligned}$ | 4 | 4 | 4 | 5 | 3 |  |
| HP-4 RIGHT to LEFT | 3 | 4 | 5 | 5 | 4 |  |
| HP-5 LEFT to RIGHT | 4 | 4 | 5 | 5 | 3 |  |
| HP-6 RIGHT to LEFT | 3 | 5 | 5 | 5 | 4 |  |
| $\begin{aligned} & \text { HP-7 LEFT to } \\ & \text { RIGHT } \end{aligned}$ | 4 | 5 | 5 | 5 | 3 |  |
| HP-8 RIGHT to LEFT | 3 | 5 | 5 | 5 | 4 |  |

Now you can make the code of any Herringbone Pineapple knot that you care to 'invent' or if you don't want to overtax your brain system just borrow one of the ready-made by S \& T

| $\mathrm{B}^{*}=3$ | $S=5$ | $S=7$ |  |
| :---: | :---: | :---: | :---: |
| $\mathrm{B}^{*}=3$ | $\mathrm{S}=11$ | $S=13$ |  |
| $B^{*}=4$ | $\mathrm{S}=3$ | $\mathrm{S}=5$ | training exercise coming just after that |
| $\mathrm{B}^{*}=4$ | $S=5$ | $S=7$ |  |
| $B^{*}=4$ | S = 5 | S = 7 | what we just did |
| $\mathrm{B}^{*}=4$ | $\mathrm{S}=11$ | $S=13$ |  |
| $\mathrm{B}^{*}=5$ | $S=3$ |  |  |
| $\mathrm{B}^{*}=5$ | $S=7$ | S $=9$ |  |
| $\mathrm{B}^{*}=5$ | $S=9$ | $\mathrm{S}=11$ |  |
| $\mathrm{B}^{*}=5$ | S = 11 | $S=13$ |  |
| $\mathrm{B}^{*}=6$ | $S=5$ | $S=7$ |  |
| $B^{*}=6$ | S = 11 | $S=13$ |  |
| $\mathrm{B}^{*}=7$ | $S=3$ | $S=5$ |  |
| $\mathrm{B}^{*}=7$ | $S=9$ | $\mathrm{S}=11$ |  |
| $\mathrm{B}^{*}=7$ | $\mathrm{S}=11$ | $S=13$ |  |

## LET US TRY AND BUILT TABLES" A LA MODE DE" SCHAAKE \& TURNER

We will aim for $S=3 \quad S=5 \quad B *=4$
We will built together the $S=3$ table and will let you built the $S=5$ as personal training, just giving your the end-solution for verification.

First let us calculate the DELTA, the step, to built the Complementary ( hence also the Cyclic ) BIGHT SEQUENCE
$\mathrm{L}($ ead $)=\mathrm{S}=3 \quad \mathrm{~B}$ (ight) $=\mathrm{B}^{*}$ (bight-nest) $=4$
Delta $=(-L)$ modulo $B=(-3) \bmod 4=1$
Complementary is $0 \times \times \times$ hence with Delta $=1$
Complementary is $\begin{array}{llll}0 & 1 & 2\end{array}$
Cyclic is 3210
$\mathrm{L}($ ead $)=\mathrm{S}=5 \quad \mathrm{~B}$ (ight) $=\mathrm{B}^{*}$ (bight-nest) $=4$
Delta $=(-L)$ modulo $B==(-5) \bmod 4=3$
Complementary is $0 \times X \times$ hence with Delta $=3$
Complementary is $\begin{array}{lllllll}0 & 3 & 6\end{array}$ to which we must apply modulo $\mathrm{B}==\begin{array}{llll}0 & 3 & 2 & 1\end{array}$
Cyclic is 1230
using $i=($ HPodd -3$) / 2$ and $i=(H P e v e n-2) / 2$ we can calculate the ' $i$ ' for each half period
remember that (in the direction of reading ) the very last entry (R-1) for ODD HP and (L-1) for EVEN HP (those cells are with a yellow background in the following illustrations )

Let us do the $\mathrm{S}=3 \mathrm{~B}^{*}=4$ table
Next page is showing the different steps that you will have to study to fully get "the easy recipe".

| $\longrightarrow$ | $\mathrm{L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R}-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  |  |  |  |
| 3 | 2 | 1 | 0 |
| $\mathrm{L}-1$ <br> HP 1 | $\mathrm{A}-1$ | $\mathrm{R}-1$ | $\leftarrow$ |

| $\longrightarrow$ | $\mathrm{L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R}-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  |  |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| $\mathrm{~L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R}-1$ | $\leftarrow$ |

|  | $\mathrm{L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R}-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  |  |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| $\mathrm{~L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R}-1$ | $\leftarrow$ |

| HP 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| $\longrightarrow$ | $\mathrm{~L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R-1}$ |
| 0 | 1 | 2 | 3 |
|  | $\searrow$ |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| $\mathrm{~L}-1$ | $\mathrm{~A}-1$ | $\mathrm{R}-7$ | $\leftarrow$ |
| HP 4 |  |  |  |

| $\longrightarrow$ | $\mathrm{L}-\boldsymbol{Y}$ | $\mathrm{A}-1$ | $\mathrm{R}-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  |  |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| $\mathrm{~L}-1$ | $\mathrm{~A}-1$ | R | $\leftarrow$ |

| $\longrightarrow$ | $L$ | $A-1$ | $R-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  |  |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| $L-1$ | $A-y$ | $R$ | $\leftarrow$ |

|  | L | $\mathrm{A}-1$ | $\mathrm{R}-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  | $\searrow$ |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| $\mathrm{~L}-1$ | A | R | $\leftarrow$ |

| $\longrightarrow$ | $L$ | $A$ | $R-1$ |
| :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 |
|  |  |  | $\searrow$ |
| 3 | 2 | 1 | 0 |
| L-1 | $A$ | $R$ | $\leftarrow$ |
| HP 8 |  |  |  |

Here is the $\mathrm{S}=\mathbf{3} \mathrm{B}^{*}=4$ tabulation completed:

| SET NUMBER | 1 | 2 | 3 | $S=3$ |
| :---: | :---: | :---: | :---: | :---: |
| Type of crossing | U | 0 | U | $\mathrm{B}^{*}=4$ |
| Ref for LEFT to RIGHT | L-1 |  | R-1 |  |
| Ref for RIGHT to LEFT | R-1 |  | L-1 |  |
| HP 1 read Left to Right | L-1 | A - 1 | R-1 | $\mathrm{i}=\mathrm{neg}$ |
| HP2 read Right to Left | R-1 | A - 1 | L-1 | $\mathrm{i}=0$ |
| HP 3 read Left to Right | L-1 | A - 1 | R-1 | $\mathrm{i}=0$ |
| HP 4 read Right to Left | R | $A=1$ | L - 1 | $\mathrm{i}=1$ |
| HP 5 read Left to Right | L | A - 1 | R-1 | $\mathrm{i}=1$ |
| HP 6 read Right to Left | R | A | L - 1 | $\mathrm{i}=2$ |
| HP 7 read Left to Right | L | A | R-1 | $\mathrm{i}=2$ |
| HP 8 read Right to Left | R | A | L-1 | $\mathrm{i}=3$ |

To use the table just enter the PARTICULAR VALUES FOR ' $\mathbf{A}$ ', L ( left bight boundary ) and $\mathbf{R}$ ( right bight boundary applying to what THK component you are doing.

Doing the $\mathbf{S}=\mathbf{5} \mathbf{B}^{*}=\mathbf{4}$ by yourself you should find the table given just under :

| SET NUMBER | 1 | 2 | 3 | 4 | 5 | $s=5$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Type of crossing | U | 0 | U | 0 | U | $\mathrm{B}^{*}=4$ |
| Ref for LEFT to RIGHT | L-1 | A-1 | A-1 | A-1 | R-1 |  |
| Ref for RIGHT to LEFT | R-1 |  |  |  | L-1 |  |
| HP 1 read Left to Right | L-1 | A-1 | A-1 | A-1 | R-1 | $\mathrm{i}=$ neg |
| HP2 read Right to Left | R-1 | A - 1 | A - 1 | A | L-1 | $\mathrm{i}=0$ |
| HP 3 read Left to Right | L-1 | A-1 | A-1 | A | R-1 | $\mathrm{i}=0$ |
| HP 4 read Right to Left | R-1 | A - 1 | A | A | L-1 | $\mathrm{i}=1$ |
| HP 5 read Left to Right | L-1 | A-1 | A | A | R-1 | $\mathrm{i}=1$ |
| HP 6 read Right to Left | R-1 | A | A | A | L-1 | $i=2$ |
| HP 7 read Left to Right | L-1 | A | A | A | R-1 | $i=2$ |
| HP 8 read Right to Left | R | A | A | A | L-1 | $i=3$ |

## ANNEXE

This is the starting point of $S=7 \quad B^{*}=4 \quad A=1 \quad \operatorname{Left}(\mathrm{i})=1 \quad \operatorname{Right}(\mathrm{i})=1$
Read Left to Right

|  | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| $I$ | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | read Right to Left |

Doing HP 1 that is ODD numbered HP and ifor this HP is negative so you read an EMPTY upper Complementary hence HP 1 is FREE RUN

Doing HP 2 that is an EVEN numbered HP with $i=0$
so you will ADD 1 to what is under the lower cyclic hence you get
Read Left to Right

|  | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ | $(0)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| $I$ | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(0)$ | $(0)$ | $(1)$ | $(0)$ | $(0)$ | $(0)$ | read Right to Left |

so reading from RIGHT TO LEFT you get
HP 2 ( even numbered HP) ( $\mathrm{i}=0$ ) O1
Now doing the HP 3 an ODD numbered ( so upper part and left to right ) with $\mathrm{i}=0$ so you get to add 1 above the 0 and you have to read

Read Left to Right

|  | $(0)$ | $(0)$ | $(0)$ | $(1)$ | $(0)$ | $(0)$ | $(0)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| $I$ | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(0)$ | $(0)$ | $(1)$ | $(0)$ | $(0)$ | $(0)$ | read Right to Left |
| hence |  |  |  |  |  |  |  |
| HP 3 (odd numbered HP) | $(\mathrm{i}=0)$ | 01 |  |  |  |  |  |

Now doing the HP 4 an EVEN numbered ( so lower part and right to left ) with $\mathrm{i}=1$
so you get to add 1 under the 1 and you have to read
Read Left to Right

|  | $(0)$ | $(0)$ | $(0)$ | $(1)$ | $(0)$ | $(0)$ | $(0)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| $I$ | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(0)$ | $(1)$ | $(1)$ | $(0)$ | $(0)$ | $(1)$ | read Right to Left |

hence
HP 4 (even numbered HP) ( $\mathrm{i}=1$ ) $\mathrm{U} 1-\mathrm{O}-\mathrm{U} 1$

Now doing the HP 5 an ODD numbered ( so upper part left to right ) with $\mathrm{i}=1$
so you get to add 1 above the 1 and you have to read
Read Left to Right

|  | $(1)$ | $(0)$ | $(0)$ | $(1)$ | $(1)$ | $(0)$ | $(0)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| $I$ | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(0)$ | $(1)$ | $(1)$ | $(0)$ | $(0)$ | $(1)$ | read Right to Left |

hence
HP 5 (odd numbered HP) (i=1) U1-O1-U1
Now doing the HP 6 an EVEN numbered ( so lower part and right to left ) with $\mathrm{i}=2$ so you get to add 1 under the 2 and you have to read

Read Left to Right

|  | $(1)$ | $(0)$ | $(0)$ | $(1)$ | $(1)$ | $(0)$ | $(0)$ |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| $I$ | 1 | $I$ | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(1)$ | $(1)$ | $(1)$ | $(0)$ | $(1)$ | $(1)$ | read Right to Left |
| hence |  |  |  |  |  |  |  |
| HP 6 (even numbered HP) | $(\mathrm{i}=2)$ | $\mathrm{U} 1-\mathrm{O} 2-\mathrm{U} 1-\mathrm{O} 1$ |  |  |  |  |  |

Now doing the HP 7 an ODD numbered ( so upper part and left to right) with $\mathrm{i}=2$ so you get to add 1 above the 2 and you have to read

## Read Left to Right

|  | $(1)$ | $(1)$ | $(0)$ | $(1)$ | $(1)$ | $(1)$ | $(0)$ |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| 1 | 1 | $I$ | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(1)$ | $(1)$ | $(1)$ | $(0)$ | $(1)$ | $(1)$ | read Right to Left |
| hence |  |  |  |  |  |  |  |
| HP 7 (odd numbered HP) | $(\mathrm{i}=2)$ | $\mathrm{U} 1-\mathrm{O} 2-\mathrm{U} 1-\mathrm{O} 1$ |  |  |  |  |  |

Now doing the HP 8 an EVEN numbered ( so lower part and right to left ) with $\mathrm{i}=3$ so you get to add 1 under the 3 and you have to read

Read Left to Right

|  | $(1)$ | $(1)$ | $(0)$ | $(1)$ | $(1)$ | $(1)$ | $(0)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 0 | 1 | 2 |  |
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
|  | 2 | 1 | 0 | 3 | 2 | 1 | 0 |
| $(0)$ | $(1)$ | $(1)$ | $(1)$ | $(1)$ | $(1)$ | $(1)$ | read Right to Left |

hence
HP 8 (even numbered HP) ( $\mathrm{i}=3$ )
U1-O1-U1-O1-U1-O1
